Recorder		Highlight Detect	Ctrl + Alt + Shift + H
Record Clipboard Text	Ctrl + Caps Lock + C		

UA Accessibility Software Comparisons

ZoomText

ZoomText is a screen reader and magnifying application, designed to assist people with a visual impairment. There are enhancements to adjust the color, pointer, cursor, and focus. The screen reader has a lot of keyboard shortcuts, including those shown on the left, but it isn't a dedicated screen reader.

Jaws

Jaws is a screen reader application, designed to assist people who are blind or visually impaired. Jaws can read out the user's exact location on the computer; it will also inform the user what program they are using, and exactly how to use it. The user can also navigate between programs and files by listening to instructions.

NaturalReader

NaturalReader is text-to-speech software which can convert text, including Word documents, web pages, PDF files, and emails. Its floating bar allows the user to select any text and press a hotkey to activate the software.

GOODFEEL, Lime, and SharpEye

- GOODFEEL:** Convert printed scores into Braille music.
- Lime:** Sighted musicians can manipulate conventional onscreen music notation and save a file which can be opened by GOODFEEL.
- SharpEye:** Scan and convert printed music for Lime, Finale, or Sibelius.
